SUMMARY

I find where a business leaks money, then build the data and AI tools that fix it. Led data and strategy for two licensed online gaming operators in Brazil (1M+ events/day): auditing and reconciling transactions, segmenting customers for CRM and measuring campaigns with control groups. Today I build AI agents on real business data, with context management, cost limits and tests.

EXPERIENCE

Head of Data & Strategy (contract) **Oct 2025 – Oct 2026**

Two licensed online gaming operators, Brazil · Remote

- Audited 3.75M transactions in BigQuery and found an exploit: bets cancelled before the round still counted as volume, inflating it 12 to 47x and distorting tournament rankings.
- Reconciled the data pipeline with the official back office (deposits within 0.005%, 99.9% of revenue variance explained) and set up 5 automated daily data checks.
- Replaced spreadsheet audiences with a daily Python pipeline that segments 176k players into 7 behavioral groups and writes them straight to the CRM (Smartico).
- Ran reactivation campaigns with a 20% holdout group: +6.5 pp return vs. control for players inactive 16 to 30 days.
- Rebuilt the true cost of the rewards program: one mechanic took 56% of the bonus budget; bonus caps were reset by the value of returning players.
- Built an executive BI (Next.js, Supabase/Postgres) and a Telegram AI agent that answers business questions in plain language, with every number checked against the database in code. Reported to the CEO; coordinated 5 people.

Product & Platform Lead **Oct 2026 – Present**

Pontto AI · AI learning platform for small-business owners · Remote

- Built the platform's AI advisor chat for business owners, with per-user context, spending caps and guardrails.
- Run product and engineering with a team of AI coding agents: one plans and writes specs, others build in parallel, and a separate one reviews and tests before every release (Next.js, Supabase, Vercel).
- Side project: WhatsApp sales AI for real estate that reads unit availability live, qualifies buyers and hands off to the broker.

Growth & Funnel Strategist (freelance) **Jun 2025 – Sep 2025**

- Acquisition funnels, channels and CRM for digital businesses, focused on lower CAC and higher LTV.

Industrial Productivity Analyst **Nov 2024 – May 2025**

Grupo 3corações (one of Brazil's largest coffee manufacturers) · via contractor

- Traced vacuum-packed coffee from the Natal plant through logistics to the shelf; the data showed damage came from procedures not followed. Standard procedures and action plans aligned factory, logistics and sales and cut damages by 40%.

Assistant to the President (joined as Trainee) **Apr 2023 – Apr 2025**

Produtiva Júnior · student-run management consulting firm

- OKR and BSC planning, pricing and feasibility studies, process mapping (BPMN), Power BI dashboards, B2B sales.

SKILLS

Data: SQL, BigQuery, PostgreSQL, Python, data quality and reconciliation, dashboards (Power BI, custom web)

CRM & Growth: customer segmentation, lifecycle and reactivation campaigns, holdout/A-B testing, LTV and CAC, Smartico CRM

AI: AI agents and chatbots, context management, LLM evals and guardrails, multi-agent workflows (Claude Code), Next.js, Supabase, Git/GitHub

Languages: Portuguese (native), English (intermediate, improving)

EDUCATION

B.Sc. Production Engineering · Federal University of Rio Grande do Norte (UFRN) · expected 2029
